DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 1,2 and 9-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bechtold, U.S. Patent 5,244,549.

Bechtold discloses the claimed method comprising the steps of electrochemically reducing an indigo dye in the presence of iron mediators (see claims 1-6). The reference further discloses a claimed range of temperatures,

Art Unit: 1753

which encompasses the claimed range (see col. 4, lines 65-70). The patent further discloses a variety of concentrations for the bath, including the amount of dye, amount of mediator and amount of alkaline agents (see examples 1-5 in columns 5-6).

The patent appears to not disclose the exact concentration amounts of the components on the electrolytic bath. It has long been held that such modification to the concentration, which is a result effective variable, is ordinarily within the purview of the ordinary artisan and is routinely optimized based upon economics and/or environmental concerns.

Consequently, the invention as a whole would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the disclosure of the Bechtold patent, because such modification to concentration has been well settled to be within the ordinary skill of the artisan involving routine experimentation to optimize the desired results.

Discovery of optimum value of result effective variable in known process is ordinarily within skill of art. In re Boesch and Slaney 205 USPQ 215. (CCPA 1980).
